Date _____

RE: Backflow Prevention Assemblies

Dear

The Black Canyon City Water Improvement District (district) has recently determined that there is an active well on your property. This could cause a backflow condition in the system. For the district to protect its water source and its customers, pursuant Arizona Administrative Code § 18-4-215, you are required to install a backflow preventer.

Date of Notice: _____

Property Owner: _____

Property Address: _____

Date Delivered: _____

Operator: _____

The district requires the backflow assembly to be installed and tested within **4 WEEKS** of receiving this notice. Failure to comply in that time frame will result in the district water meter being shut off. The back flow assembly must be testable, and at least a double check valve. The back flow assembly must be certified annually by a licensed backflow assembly technician.

Assemblies: Febco 850, Watts 007, Wilkins 350, Wilkins 950, Wilkins 950 XLT2.

Ariz. Admin. Code § 18-4-215 - Backflow Prevention

- A. A public water system shall protect its system from contamination caused by backflow through unprotected cross-connections by requiring the installation and periodic testing of backflow-prevention assemblies. Required backflow-prevention assemblies shall be installed as close as practicable to the service connection.

Thank you for your cooperation.

Black Canyon City Water Improvement District Management, Bob Hanus 602-327-3460
